WORK EXPERIENCE

QubeWorx

October 2024 -Present

DevOps Engineer

South Africa

- Built and maintained production-grade AWS infrastructure (EC2, S3, IAM, CloudWatch), improving platform reliability and supporting scalable IoT and analytics workloads used by internal teams and clients.
- Designed automated CI/CD pipelines using GitHub Actions and Docker, enabling reliable deployment of containerized microservices and reducing manual deployment effort by over 50%.
- Implemented Infrastructure-as-Code using Terraform and Azure DevOps to provision repeatable cloud environments, dramatically improving consistency, auditability, and speed of provisioning.
- Led cloud security hardening initiatives—configuring IAM policies, Secrets Management, network isolation, and automated security checks—reducing configuration drift and eliminating critical vulnerabilities.
- Built internal monitoring and observability dashboards using Grafana, Prometheus, and Azure IoT Hub, improving incident detection and reducing troubleshooting time across IoT and backend systems.
- Worked with containerized workloads and Kubernetes-based deployment patterns; developing hands-on experience with cluster operations and CI/CD integration.
- Developed custom automation scripts (Python + Bash) for system health checks, log processing, and DevOps workflows, removing repetitive tasks and improving operational efficiency.
- Deployed and maintained internal databases (Influx DB, MSSQL, MySQL) used for IoT analytics and digital-twin workloads; implemented backup/restore processes, optimized data-retention rules and post-incident reviews.

AWS - She Builds Program

July 2023 – July 2024

Technical Support Apprenticeship

Netherlands-Remote

- Supported EMEA sales and operations initiatives across multiple customer segments, aligning technical delivery with commercial objectives to help reduce onboarding by 20% through platform readiness inputs.
- Contributed to operational planning and cost-awareness discussions by analyzing usage, capacity, and spend signals, reinforcing cloud cost-optimization and scalability principles.
- Acted as a bridge between sales, operations, and technical stakeholders, translating customer requirements into delivery and improving cross-team turnaround time and reducing clarification cycles by 30%.
- Supported data-driven sales and operational reporting, working with KPIs and performance metrics to inform decisions used in large-scale cloud environments.
- Streamlined internal workflows for sales and operations reporting by implementing automated tracking and dashboards, reducing manual data aggregation time by ~40%.

Upwork

February 2021 – February 2023

Python Developer

USA - remote

- Delivered 15+ Python-based projects for international clients, including data processing scripts, REST APIs, and automation tools, consistently meeting deadlines and client specifications in a fully remote environment.
- Built and optimized backend services and data pipelines, improving data processing efficiency by 30–50% through refactoring, caching, and query optimization.
- Developed and integrated RESTful APIs using frameworks such as Flask and FastAPI, supporting applications with thousands of daily requests and ensuring reliability and scalability.
- Automated repetitive workflows and reporting tasks, reducing manual effort by 40%+ and enabling clients to make faster, data-driven decisions.
- Collaborated with cross-functional stakeholders and non-technical clients, translating business requirements into technical solutions and maintaining a high client satisfaction rate by communication and reliable delivery.

EDUCATION

University of Pretoria, South Africa

April 2026

Master of Science (MSc) in Architecture – Application of Digital Twins for End-User Infrastructure

Tech4Dev, USA

April 2024

Certificate in Data Science and Artificial Intelligence

University of Nairobi, Kenya

July 2020

Bachelor of Architecture (Hons) Bachelor of Architectural Studies (Degree)

CERTIFICATIONS, SKILLS & INTERESTS

- **Certifications:** Litmus Edge Developer, Ignition Core Certification, AWS Cloud Practitioner, IBM Data Science Certification, Microsoft Certified: Azure Fundamentals and Azure DevOps Engineer Expert(ongoing)
- **Languages & Frameworks:** Python, Django, FastAPI, Flask, SQL, React. **APIs & Testing:** REST APIs, Postman, Swagger, OAuth2, Pytest. **Infrastructure:** Docker, GitHub Actions, Azure IoT Hub, Railway, Procure. **Cloud & CI/CD:** Azure, AWS, CircleCI. **Data Visualization:** Power BI, Recharts, Plotly. **Monitoring & Security:** GxP compliance, HTTPS, Logging & Exception Handling. **Version Control:** Git, GitHub, Bitbucket
- **Memberships:** Digital Twin Consortium (USA), IoT Council (Europe), International Society of Automation (ISA), The SAIMC (Society for Automation, Instrumentation, Mechatronics and Computer Engineering); Johannesburg Microsoft Developer User Group, Cloud Native Computing Foundation (CNCF).
- **Languages:** Proficient English, French DELF B1, Learning isiZulu, Native Swahili.
